A wide range of LED lighting fixtures for high ceilings (6-10 m) is now available. We offer a safe lighting environment that is both comfortable and energy efficient, ideal for factories.

Advantages of Panasonic LED lighting for High-ceiling (6-10 m) spaces

Energy saving

About 50% or more energy* can be saved with almost the same brightness as conventional lighting fixtures.

*See the comparison table below.

Long-life light source

Light source life of 40,000 or 60,000 hours reduces maintenance such as lamp replacement.

Instant lighting

The light can be frequently switched on and off since it can instantly be lit. This allows users to save energy.

External driver type
External driver type DB series makes it possible to change to LED lights by using the existing wiring.
LED lighting fixtures for high ceilings [External driver type] DB series

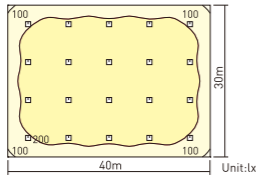

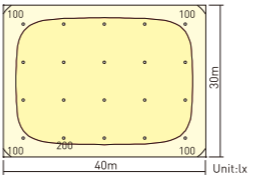

Integrated driver type
Brightness can be changed depending on time and work, allowing for power savings.
LED lighting fixtures for high ceilings Module type [Integrated driver type]

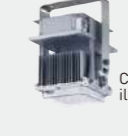

Line type
The iD series lighting fixtures for factories can save roughly as much energy as 76% compared with a mercury lamp 400 model.
iD series lighting fixtures for factories

Example of economic comparison with conventional models

About 50% energy savings is possible compared with conventional multiple halogen lights.

DB Series LED lighting fixtures for high ceilings [External driver type]

The compact shape and equivalent weight to HID fixtures have been achieved by utilizing an external driver. Replacement of HID fixtures with LED is made easy since already existing wiring can be used.

DB Suitable for replacement of HID high bay

Features

A quick connection terminal block is built in for easy installation. This model can be connected to a round junction box using the existing wiring.

Slim & lightweight design

This model is suitable for replacement using the existing facility because of the slim and lightweight design equivalent to conventional lighting fixtures for high ceilings.

Light source life of 40,000 hours (87% luminous flux maintenance rate)

The design releasing the LED heat efficiently has achieved 87% luminous flux maintenance rate, ensuring brightness from installation to the end of product lifetime.

Dust-proof clean body

The optimized heat releasing design has achieved a clean dust-proof body without radiation fins.

Three types suitable for replacement are available.

Note)
*Please use DB Series fixtures with their specified driver.
*The ambient temperature range for both the fixture and the driver is -20~40 °C. The fixture and driver may operate in temperatures up to 45°C for short periods of time. Operating outside the ambient temperature range may shorten the lifetime and decrease the brightness of the LED.
*Must not be used in areas subject to windy conditions. Must only be used indoors.

LED lighting fixtures for high ceilings module type [Integrated driver type]

The integrated driver design saves labor with less required wiring.

Suitable for large factories

Features

Initial illuminance correction and dimming function are equipped to contribute to considerable power saving.

The initial illuminance correction function, which reduces the initial excess brightness of light source and automatically adjusts to proper brightness, is equipped.

Light source life of 60,000 hours (85% luminous flux maintenance rate)

The design releasing the LED heat efficiently has achieved 85% luminous flux maintenance rate, ensuring brightness from installation to the end of product lifetime.

The lightweight design of about 9kg* saves labor for installation.

*In the case of NNY20630K

NNY20630K
Weight: approx. 9 kg

LED lighting fixtures for high ceilings module type 2500 model [Integrated driver type]
Equivalent to mercury lamp 700 model

Safety anti-drop wire is equipped as standard.

For safety, anti-drop wire is equipped as standard.

Two types (medium/wide angle) of light distribution are available depending on your needs.

The medium angle type, which ensures floor illuminance efficiently, and the wide angle type, which ensures spatial brightness, are available.

Recommended products

Specifications	Initial illuminance correction type (average power 198 W) Weight: 9.0 kg		Initial illuminance correction type (average power 174 W) Weight: 9.0 kg	Initial illuminance correction type (average power 106 W) Weight: 6.4 kg

Note)
*Equivalent types to 5000 model mercury lamp 700 model x 2 units and 4000 model metal halide lamp 1000 model are also available.
*The ambient temperature range for both the fixture and the driver is -20~40°C. The fixture and driver may operate in temperatures up to 50°C for short periods of time. Operating outside the ambient temperature range may shorten the lifetime and decrease the brightness of the LED.
*Must not be used in areas subject to windy conditions. Must only be used indoors.

iD Series

Lighting fixtures for high ceilings

The high-efficiency, narrow-angle distribution light bar (prism type for high ceilings) and the light condensing and diffusion (low glare) light bar (prism type) have been introduced into the product lineup. These types are suitable for spaces with high ceilings such as factories and warehouses. For safety, a polycarbonate anti-scattering cover is equipped in case of an unforeseen accident.

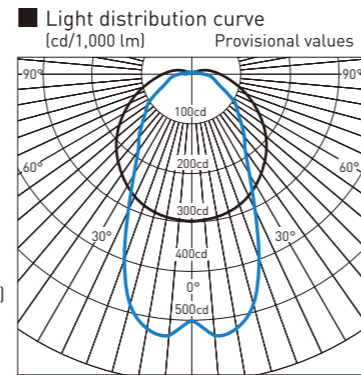

iD Series lighting fixtures for high ceilings (Prism type light bar for high ceilings)

Suitable for spaces with high ceilings such as factories and warehouses

High efficiency, narrower-angle prism type light bar is equipped for high ceilings. This model is suitable for about 8-meter-high ceilings of factories and warehouses.

1/2-beam angle: approx. 60° (general type: 120°)
 Maximum light intensity: approx. 500 cd (general type: approx. 300 cd)

— Prism type light bar for high ceilings: vertical A cross-section
 — Opalescent type light bar: vertical A cross-section

About 79% power saving is possible, compared with a mercury lamp 400 model.

■ In case of an 8-meter-high ceiling

Illuminance distribution and power are provisional values.

	Mercury lamp 400 model Shade: YK34380 Holder: YB16854 Lamp: HF400XW	iD series lighting equipment for high ceilings Equipment body: XLX490NTNC
Illuminance distribution chart		
Average illuminance	332 lx	297 lx
Equipment power x number of units	415W x 24 units	91.8W x 24 units
Power consumption	9,960W	2,203W

Comparison conditions: room space: 32 m x 20 m x installation height 8 m / reflectance: ceiling 30%, wall 30%, floor 10% maintenance factor: mercury lamp 0.69, iD series 0.81

These user-friendly lighting fixtures for high ceilings have been introduced to the product lineup.

The lighting fixture for high ceilings is lightweight (body: approx. 2.7 kg / light bar: approx. 1.1 kg) for easy installation and the thin white non-oppressive shape is suitable for high ceilings of factories and warehouses with ceiling raceways. Light with high flux and high color rendering (CRI 83) in combination with the prism light bar for high ceilings is available at an affordable price.

Light source with a plastic anti-scattering light cover

For safety, a polycarbonate anti-scattering cover is equipped in case of an unforeseen accident.

Polycarbonate, which has flame resistance and toughness, is used for the translucent plastic cover of the LED light source.

*The ambient temperature range for both the fixture and the driver is 5-35°C.
 Operating outside the ambient temperature range may shorten the lifetime and decrease the brightness of the LED.
 *Must not be used in areas subject to windy conditions. Must only be used indoors.

Body

NNLK42590

Light bar

Prism type light bar for high ceilings

Specifications

- Built-in LED built-in power supply unit
- Voltage: 100-242 V
- Body: galvanized steel plate (white)
- Light source mounting part: steel plate (white powder coating)
- Light bar (cover): polycarbonate (prism)
- Weight: 4.9 kg
- Life of light source: 40,000 hours (85% luminous flux maintenance rate)

Remarks

- For direct mounting on ceilings only

Type of brightness	Light bar model number	Color temperature
6900 lm type	NNL4600TNC LE9	5000K
5200 lm type	NNL4500TNC LE9	

Note) The LED light source may look glaring if the prism type light bar for high ceilings is installed in a place where the light source directly comes into sight.

Note) Use the prism type light bar for high ceilings in combination with the specified iD Series body.

When one light bar is used, non-uniformity of the irradiation surface (striped shades) may appear depending on the installation location.

Note) Feed wiring in the fixture is not possible. Return the feed wiring of the power cable back to the ceiling.

Note) This fixture satisfies the performance in combination with the body and light bar for the Panasonic iD Series.

Do not use the light bar by itself or combine with different products from the Panasonic iD Series.

Note) This fixture is designed for general indoor use. Do not use this fixture outdoors (including semi-outdoor conditions such as under eaves) or a place where the fixture is exposed to corrosive gas or direct sunlight.

Note) Products with the same model number may have different luminous colors or brightness because LEDs have some variations.

iD Series

Lighting fixtures for mid-height (5-meter) ceilings

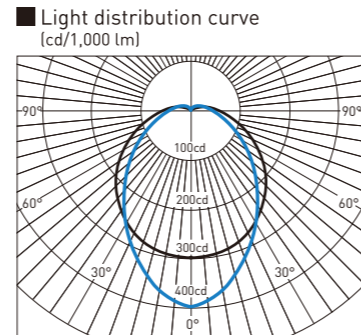

iD Series lighting fixtures (Prism type light bar for mid-height ceilings)

Suitable for applications such as factories and warehouses

Use this prism type light bar, for mid-height ceilings which has light condensing and diffusion (low glare) properties, used in combination with the iD Series body. This type is suitable for applications such as factories and warehouses with about 5-meter-high ceilings.

1/2-beam angle: approx. 80° (general type: 120°)
Light intensity immediately below light source: approx. 400 cd (general type: approx. 300 cd)

— Prism type light bar: vertical A cross-section
— Opalescent type light bar: vertical A cross-section

About 65% energy savings is possible compared with conventional fluorescent lights

New energy-efficient LED floodlights.

High-efficiency exceeding 100 lm / W*

Significantly High-efficiency has been achieved while maintaining a brightness equivalent to conventional HID floodlights.

This floodlight illuminates spaces with low power consumption.

* 1/10-beam angle 35°, 50°, and 70° types

Over 100lm / W*

Lumens per watt (lm/W) is an indicator of cost efficiency. Lumens per watt is a unit of efficiency representing how much light (light flux: lm) per 1 W of power consumption is emitted. The higher lumens per watt, the more energy will be saved.

About 50% reduction in power consumption*

Power consumption has been reduced by about 50%* while maintaining a brightness equivalent to conventional HID 1000 model floodlights, contributing to cost savings.

Comparison of power consumption

About **50%** reduction in power consumption*

Average LED 549W

Conventional HID 1000 model floodlight: 1090W

*Comparison between an HID 1000 model floodlight YAX56565K-lamp MF1000B/BH-SCx1 and a LED floodlight NNY24626

Equipped with a safety wire

In case of severe vibrations or strong winds, the safety wire is included as a standard to prevent the fixture from falling.

Brightness is ensured throughout the product lifetime

Due to a good thermal management design that releases the LED heat efficiently, 85% luminous flux maintenance rate can be achieved throughout the lifetime of this floodlight.

NNY24626

Compact body with a reduced pressure area

This small pressure area reduces the load on the base.

Four types of light distribution*

There are four types of light distribution types available to suit your needs. 1/10 beam angle of 125° is also available upon special request.

*LED floodlight (equivalent to metal halide lamp 2000/1500 models 1000 models)

1/10-beam angle

LED floodlight (equivalent to metal halide lamp 2000/1500 models)

Shock-resistant front panel

Shock-resistant polycarbonate front panel is utilized to prevent scattering when damaged.

Conceptual illustration

Integrated driver type for easy installation

Unlike conventional HID floodlights, this integrated driver type does not need to secure a place for installing an integrated driver. This type can be easily installed with the wiring box at the back.

Back of LED floodlight

The initial light flux correction feature contributes to saving energy.

The initial luminous flux correction function, which automatically corrects the excess brightness of the initial light source, is equipped to contribute to saving energy.

Salt-resistant specification

This model can be used in areas adjacent to the coast.

LED light source life of 40,000 (60,000) hours

These LED floodlights can produce maximum brightness instantly.

We offer a wide selection of brightness and light distribution options to fulfill your unique needs.

Recommended options for each application.

Average illuminance	Overall horizontal illuminance: 39.1lx Vertical illuminance:[40y] 193 lx • [40y] 121 lx • [200y] 110 lx	almost the same	Overall horizontal illuminance: 37.2 lx Vertical illuminance:[40y] 179 lx • [40y] 137 lx • [200y] 140 lx
Power consumption	approx. 24.0 kW	about 48% power saving	approx. 12.4 kW (average power)

[Conditions of illumination design] target vertical illuminance: 100 lx / equipment installation height: 8 m / floor level for horizontal illuminance calculation: 1 m
maintenance factor: HID floodlight 0.68, LED floodlight 0.81

LED floodlight module type lineup

Equivalent to metal halide lamp

2000/1500 models

Suitable for stadiums

Integrated driver type

Louver is equivalent to metal halide lamp
2000/1500 models

NNY28438K Salt-resistant

Specifications
•Body: stainless steel (off-black)

Remarks
•Applicable model number:
NNY24640-NNY24643-
NNY24641- NNY24642

1/10- beam angle	28°	NNY24640 98500 lm 1075W (Average power: 994W) 91.6 lm/W CRI 70
	35°	NNY24643 111400 lm 1075W (Average power: 994W) 103.6 lm/W CRI 70
	50°	NNY24641 117800 lm 1075W (Average power: 994W) 109.6 lm/W CRI 70
	75°	NNY24642 115000 lm 1075W (Average power: 994W) 107.0 lm/W CRI 70
Major features	<ul style="list-style-type: none"> •Lifetime: 40,000h •Luminous flux maintenance rate: 85% •Rated power type initial light flux correction •5000K •Polycarbonate front panel •Rainproof •Salt-resistant •Safety wire equipped 	
Specifications	<ul style="list-style-type: none"> •Built-in LED-built-in power supply unit •Voltage: 200-242 V •Body: aluminum •Front panel: polycarbonate (transparent) •Arm: steel (hot-dip galvanized) •Handle: stainless steel •Survival wind speed: 60 m/sec. •Weight: 30.4 kg <p>Note) Dimming not possible</p>	
Fixture angle range	•Horizontal mounting	•Vertical mounting (downward)

Equivalent to mercury lamp

1000 models

Suitable for open spaces, parking lots, etc.

Integrated driver type

Louver is equivalent to mercury lamp
1000 models

NNY28436 Salt-resistant

Specifications
•Body: stainless steel (off-black)

Remarks
•Applicable model number:
NNY24610K-NNY24611K-
NNY24612K

1/10- beam angle	28°	NNY24610K 32800 lm 354W (Average power: 327W) 92.7 lm/W CRI 70
	50°	NNY24611K 39500 lm 354W (Average power: 327W) 111.6 lm/W CRI 70
	75°	NNY24612K 38500 lm 354W (Average power: 327W) 108.8 lm/W CRI 70
Major features	<ul style="list-style-type: none"> •Lifetime: 40,000h •Luminous flux maintenance rate: 85% •Rated power type initial light flux correction •5000K •Polycarbonate front panel •Rainproof •Salt-resistant •Safety wire equipped 	
Specifications	<ul style="list-style-type: none"> •Built-in LED-built-in power supply unit •Voltage: 200-242 V •Body: aluminum •Front panel: polycarbonate (transparent) •Arm: steel (hot-dip galvanized) •Handle: stainless steel •Survival wind speed: 60 m/sec. •Weight: 11.8 kg <p>Note) Dimming not possible</p>	
Fixture angle range	•Horizontal mounting	•Vertical mounting (downward)

Equivalent to metal halide lamp

1000 models

Suitable for playing fields/driving ranges

Integrated driver type

Louver is equivalent to metal halide lamp
1000 models

NNY28437K Salt-resistant

Specifications
•Body: stainless steel (off-black)

Remarks
•Applicable model number:
NNY24625-NNY24628-
NNY24626- NNY24627

1/10- beam angle	28°	NNY24625 53700 lm 593W (Average power: 549W) 90.6 lm/W CRI 70
	38°	NNY24628 59000 lm 593W (Average power: 549W) 99.5 lm/W CRI 70
	50°	NNY24626 64200 lm 593W (Average power: 549W) 108.3 lm/W CRI 70
	75°	NNY24627 62500 lm 593W (Average power: 549W) 105.4 lm/W CRI 70
Major features	<ul style="list-style-type: none"> •Lifetime: 40,000h •Luminous flux maintenance rate: 85% •Rated power type initial light flux correction •5000K •Polycarbonate front panel •Rainproof •Salt-resistant •Safety wire equipped 	
Specifications	<ul style="list-style-type: none"> •Built-in LED-built-in power supply unit •Voltage: 200-242 V •Body: aluminum •Front panel: polycarbonate (transparent) •Arm: steel (hot-dip galvanized) •Handle: stainless steel •Survival wind speed: 60 m/sec. •Weight: 20.1 kg <p>Note) Dimming not possible</p>	
Fixture angle range	•Horizontal mounting	•Vertical mounting (downward)

Equivalent to metal halide lamp

400 models

Suitable for open spaces, parking lots, etc.

Integrated driver type

Louver is equivalent to metal halide lamp
400 models

NNY28435 Salt-resistant

Specifications
•Body: stainless steel (off-black)

Remarks
•Applicable model number:
NNY24600K-NNY24601K-
NNY24602K

1/10- beam angle	28°	NNY24600K 18300 lm 188W (Average power: 174W) 97.3 lm/W CRI 70
	50°	NNY24601K 22800 lm 188W (Average power: 174W) 121.3 lm/W CRI 70
	75°	NNY24602K 22000 lm 188W (Average power: 174W) 117 lm/W CRI 70
Major features	<ul style="list-style-type: none"> •Lifetime: 60,000h •Luminous flux maintenance rate: 85% •Rated power type initial light flux correction •5000K •Polycarbonate front panel •Rainproof •Salt-resistant •Safety wire equipped 	
Specifications	<ul style="list-style-type: none"> •Built-in LED-built-in power supply unit •Voltage: 100-242 V •Body: aluminum •Front panel: polycarbonate (transparent) •Arm: steel (hot-dip galvanized) •Handle: stainless steel •Survival wind speed: 60 m/sec. •Weight: 10.7 kg <p>Note) Dimming not possible</p>	
Fixture angle range	•Horizontal mounting	•Vertical mounting (downward)

lm: light flux emitted from LED equipment W: consumption power average power lm/W: intrinsic energy consumption efficiency (at 200 V)
Note) Products with the same model number may have different luminous color or brightness because LED has some variations.
